## Skills

|                      |                                                                                                                                                                             |
|----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Core stack           | HTML, CSS, Javascript, Typescript, React.js, Next.js, Redux-Toolkit, Zustand, React-Query, RTK-Query, React Hook Form, Zod, SCSS/SASS, Tailwind, MaterialUI, ShadcnUI, etc. |
| Architecture         | FSD, SOLID, Clean Architecture                                                                                                                                              |
| Additional Languages | Unit/Integration Testing, Backend/Fullstack Development, Git, Docker<br>Russian, English, Kazakh                                                                            |

## Опыт

### Frontend Team Lead Developer | AURAxCAPITAL

June 2024 – April 2026

- **Core Stack:** React.js, Redux Toolkit, Tailwind, ShadcnUI, REST API, Websockets, Tonconnect SDK, Web3 integration, Smart Contracts.
- **Management & Architecture:** Led a frontend team of 3 developers, established code review processes, and enforced unified coding standards (Code Style). Designed and successfully implemented FSD architecture across the project, ensuring strict adherence, which streamlined scalability and codebase maintenance.
- **TMA Project (Link: [@auraxcryptobot](#)):**
  - **Project Stack:** Telegram Mini Apps API, Stonfi SDK.
  - **Web3 & Telegram Mini Apps:** Responsible for developing the frontend part of the crypto exchange inside Telegram with full integration into the TON ecosystem. Independently implemented two-way blockchain interaction, including TON wallet operational logic, swap execution, limit operations, and company NFT minting/purchasing. Introduced interactive gaming mechanics for trading simulation, which reduced user churn during the onboarding stage by 35% and helped scale the product to over 100,000+ monthly active users.
- **WEB Project (Link: [Aura Finance](#)):**
  - **Project Stack:** Tonconnect SDK, Web3 integration, Bidask SDK, ArrakisV2, Wagmi, Viem.
  - **Web3 & Cross-chain Web Application:** Developed the web version of the crypto exchange, enabling trading operations across TON and EVM networks. Configured integration with EVM blockchains utilizing Wagmi and Viem. Implemented interaction logic with DeFi pools and liquidity protocols, creating a secure and intuitively clear interface for asset exchange and limit-order placement.

### Middle Frontend Developer | BRSYS

May 2023 – June 2024

- **Core Stack:** React.js, Next.js, SSR, ISR, React Hook Form, Zod, CSS-Modules.
- **Architecture Migration & SEO Optimization:** Designed and developed an e-commerce platform architecture from scratch using React.js, then successfully completed a full project migration to Next.js to satisfy new business requirements. Implemented SSR and ISR rendering strategies, which radically accelerated page loading speeds and increased website visibility across search engines.
- **Third-Party Services Integration & Security:** Developed a flexible component architecture with a high level of reusability to simplify code maintenance and scalability. Performed integration of backend APIs and authentication/authorization systems.
- **Performance Optimization:** Optimized client-side rendering by implementing dynamic imports, code splitting, and lazy loading for heavy components. As a result, achieved significant improvements in Core Web Vitals metrics, enhanced application stability, and increased user conversion rates.

### Freelance Fullstack Developer

April 2021 – May 2023

- **Link:** [Website portfolio](#).
- **Core Stack:** HTML dev, React.js, Next.js, PHP, WordPress.
- **Responsibilities:** Successfully designed and developed end-to-end ("turnkey") web applications for various clients, managing the full project lifecycle. Specialized in integrating modern frontend frameworks with robust backend logic and third-party APIs, while simultaneously handling project management, strict deadline compliance, and direct communication with clients.

## Education

Computer Engineering and Software | Bachelor's Degree  
S. Seifullin Kazakh Agro Technical University (KATU)

2020-2024
